Grading rubric for paper presentations, PHYS177, Spring 2013

Accurate description of problem and hypothesis  20%
Explanation of methods  20%
Interpretation of results/conclusions  30%
Overall clarity of the presentation  15%
Ability to answer questions about the paper  15%

Available dates: May 7, 8, 9

Things to keep in mind and suggestions:

- Your total time slot is 15 minutes, so plan on finishing your talk in 12 minutes and leaving 3 minutes for questions.
- We strongly suggest that you have no more than 11-12 slides or you will likely run out of time.
- If you want to use your own laptop, make sure it has a functional VGA output. If you do not have/do not wish to use your own, please make arrangements in advance to share another student's laptop or, if absolutely necessary, contact Vlad about borrowing his.
- You are encouraged, but not required, to attend all three sessions. However, we will not be taking attendance so you may only come on the day you are scheduled to present.
- Practice your presentation with a timer at least a few times. Due to the large number of people and limited amount of time, we will be forced to cut you off if you go overtime. This is representative of the presentation format at a real scientific conference.
